

CYDEO

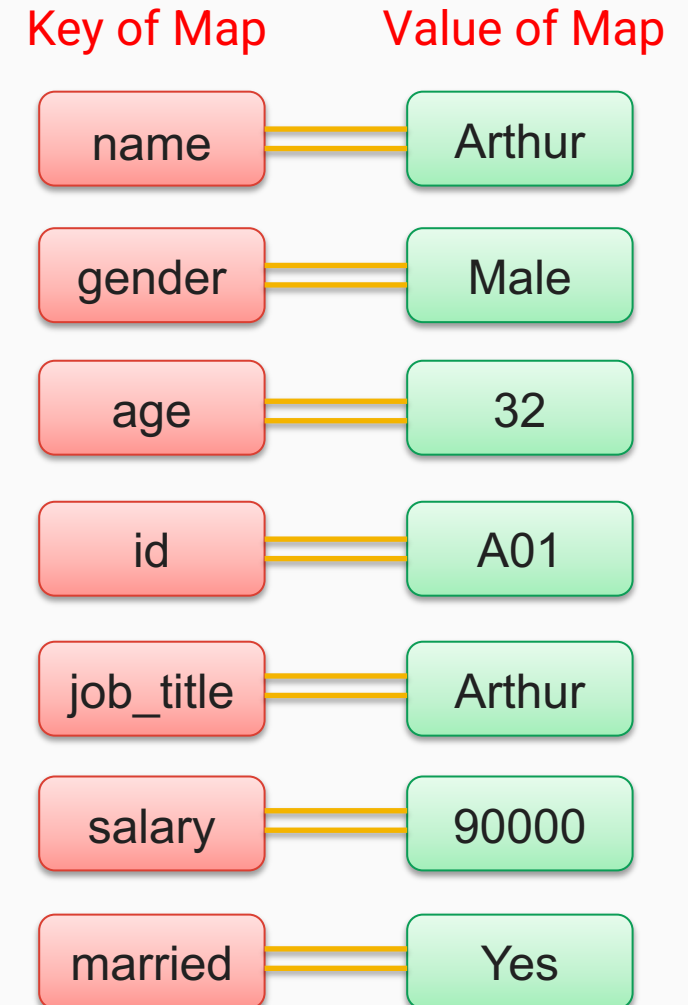

Maps

Java Collections Framework

Collection Of Pairs

Key	Value
name	Arthur
gender	Male
age	32
id	A01
job title	Developer
salary	110000
married	Yes

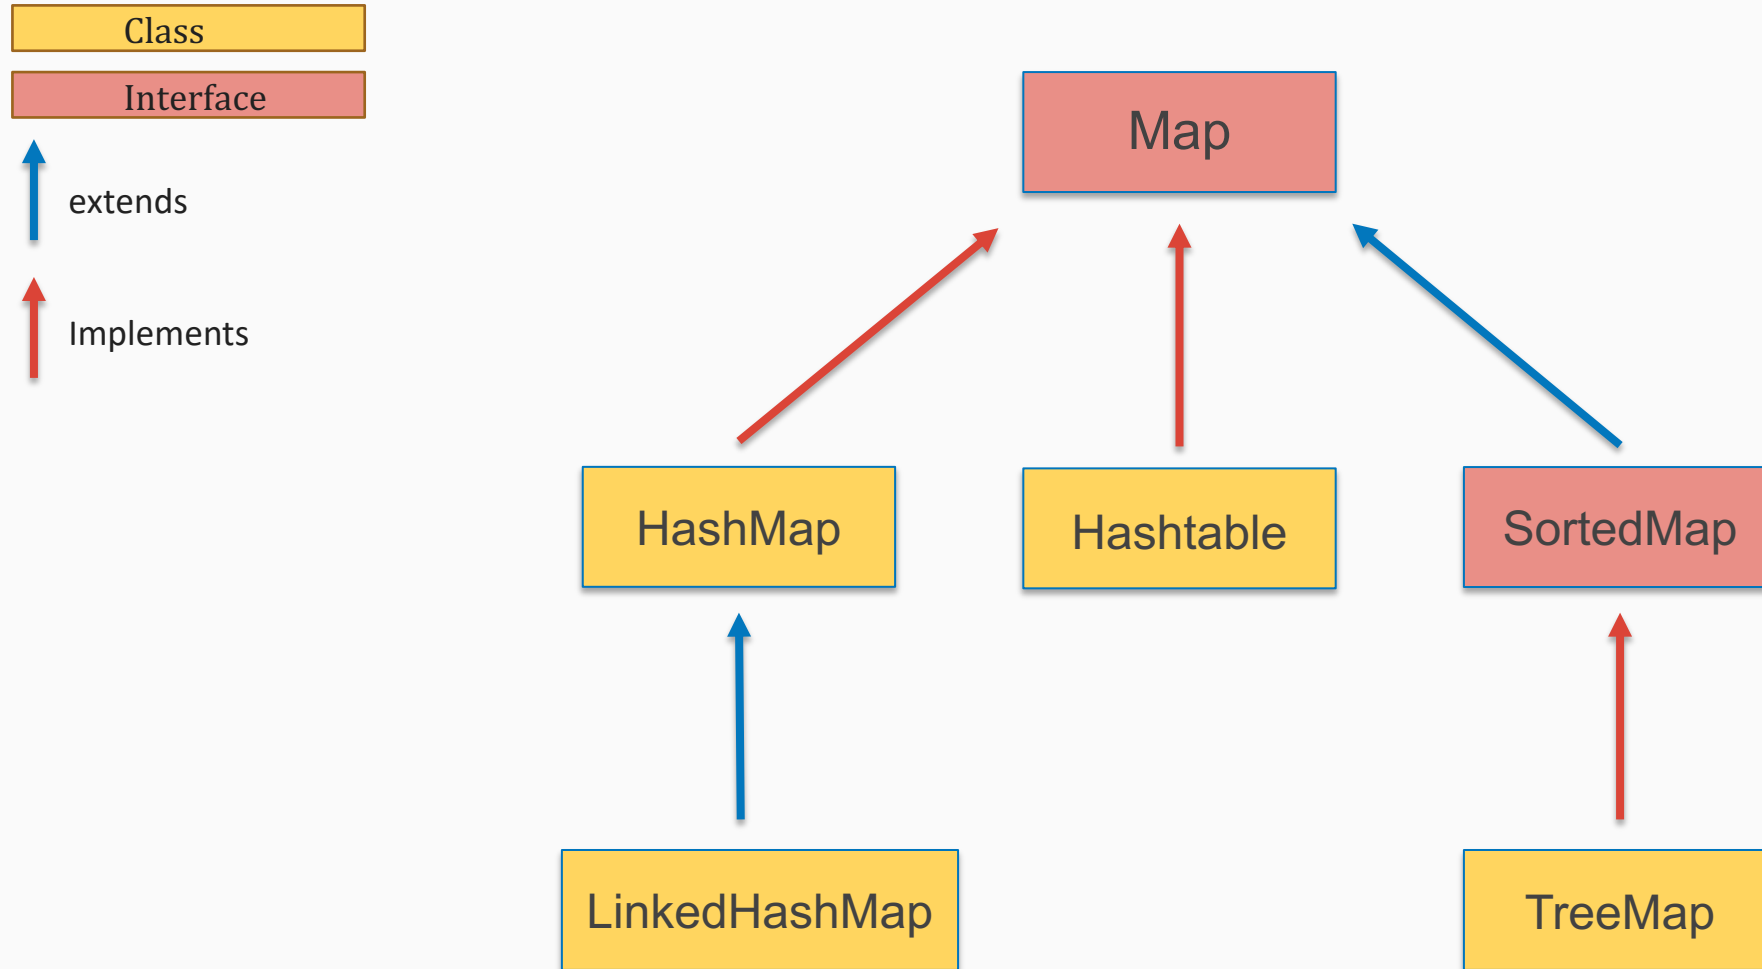

Map

- Data structure based on the **key + value** pairs
- Does not have IS A relation with Collection
- Size can be increased or decreased
- Key can **not** be duplicated

```
import java.util.Map;
```

Key	Value
name	Arthur
gender	Male
age	32
id	A01
job title	Developer
salary	110000
married	Yes

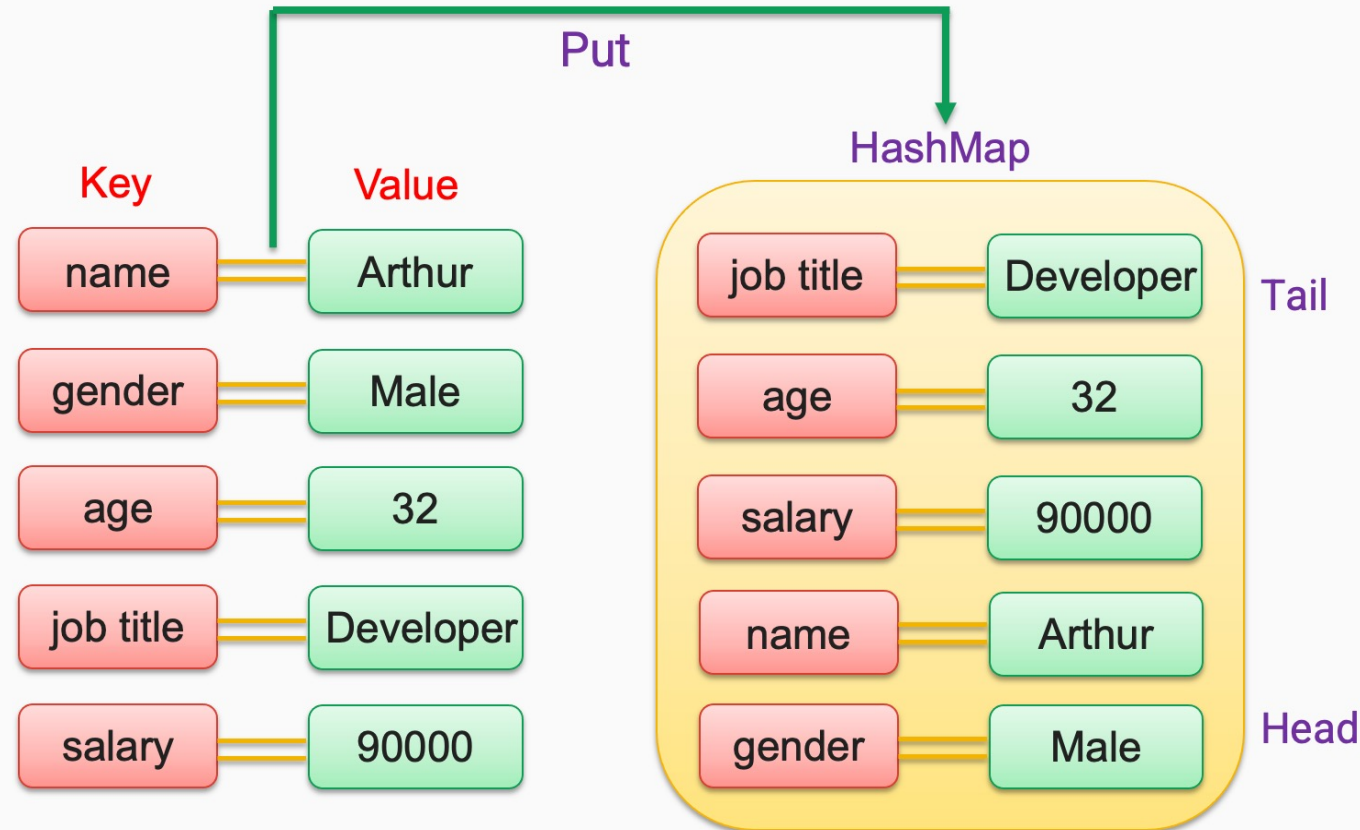

Map Hierarchy

HashMap Class

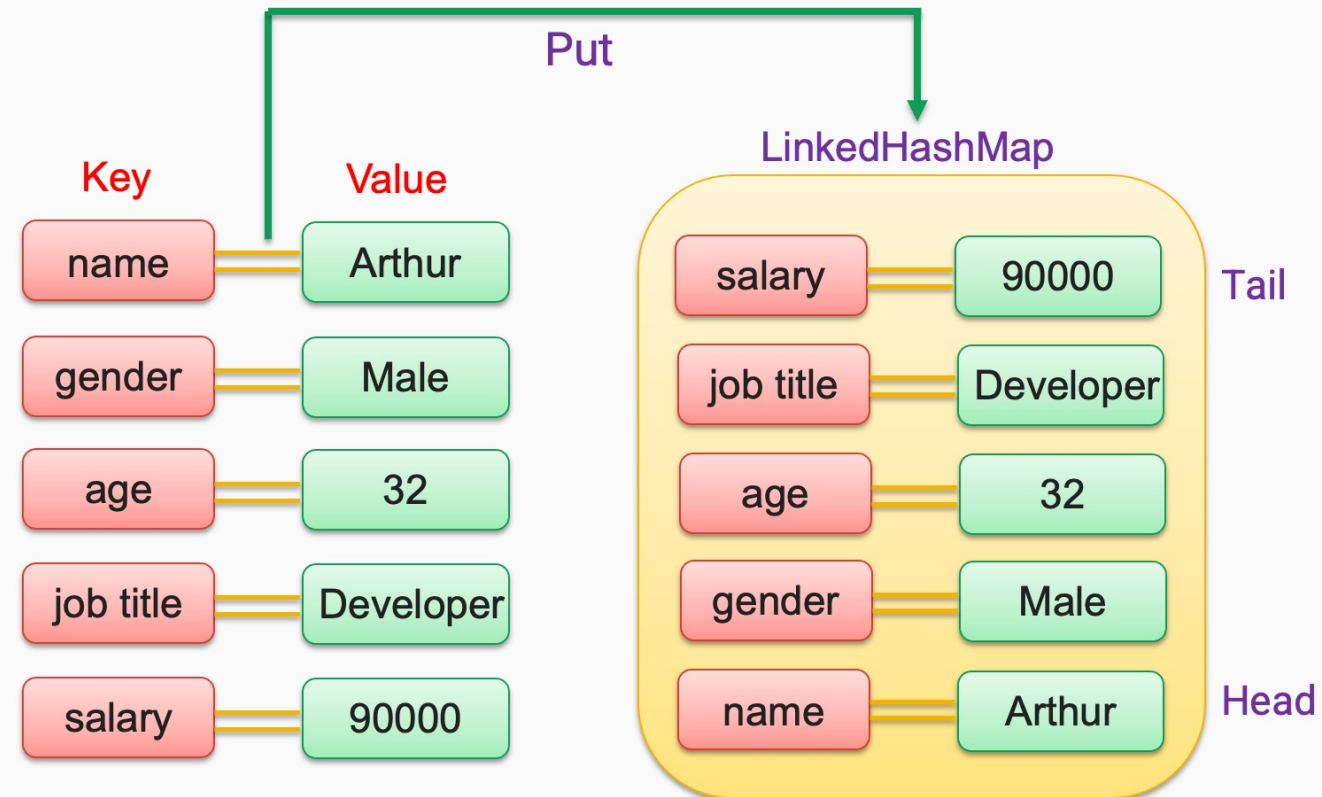

- Implements the Map interface
- Maintains the random order
- Accepts null value as a key

```
import java.util.HashMap;
```

LinkedHashMap Class

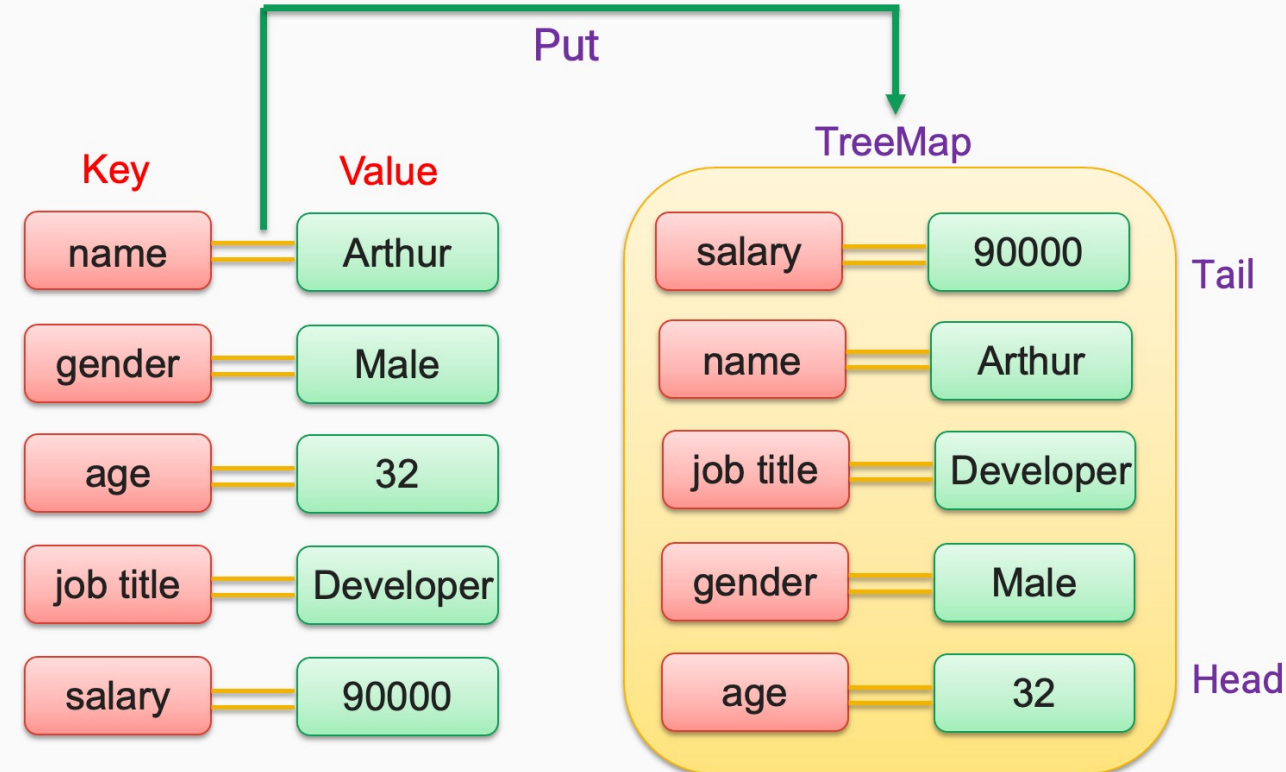

- Child class of HashMap
- Maintains the **insertion** order
- Accepts null value as a key

```
import java.util.LinkedHashMap;
```

TreeMap Class

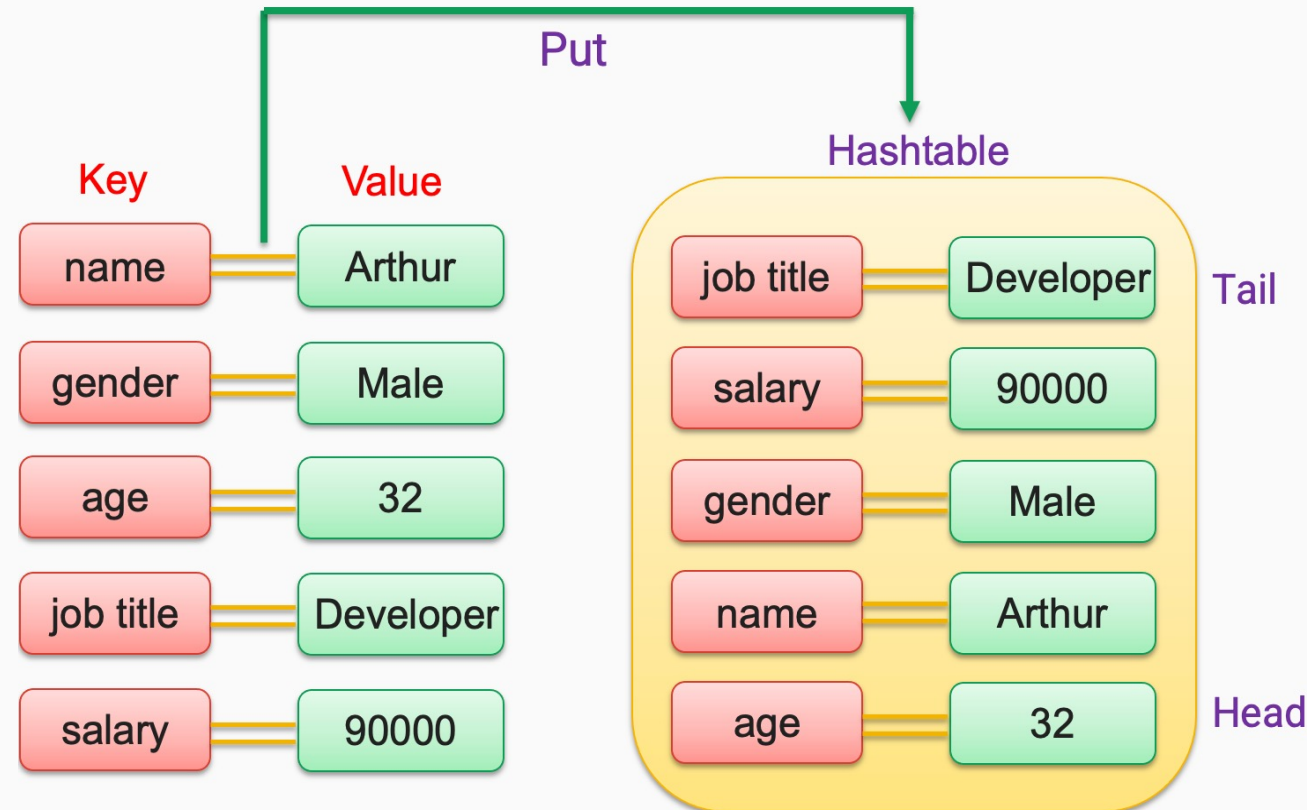

- Implements the SortedMap Interface
- Maintains the sorted (Ascending) order
- Does not accept null as a key

```
import java.util.TreeMap;
```

Hashtable Class

- Implements the Map interface
- Maintains the random order
- Does not accept null as a key or values
- Synchronized (Thread-Safe)

```
import java.util.Hashtable;
```

HashMap vs LinkedHashMap vs Hashtable vs TreeMap

HashMap	LinkedHashMap	TreeMap	Hashtable
Not synchronized	Not synchronized	Not synchronized	Synchronized
allows one null key and multiple null values	allows one null key and multiple null values	does not allow any null key but allows null values	does not allow any null key or null value
Maintains the random order	Maintains the insertion order	Maintains the sorted order	Maintains the random order

Methods Of Map

Method	Method	Method
put()	get()	size()
replace()	remove()	containsKey()
containsValue()	isEmpty()	equals()
clear()	putAll()	keySet()
values()	entrySet()	getKey()
getValue()	setValue()
